

COSC 2030 FA25 Midterm Project Preliminary Work 1: Intro to Greenfoot

I'd like to use Greenfoot, which is a Java API for building 2-D games. Even though it is in Java, I think you will find the syntax very much like C++. I have a few motivations for this project:

- Exposure to Java -- this will be a gentle exposure to the Java programming language if you haven't seen it before
- See some of the concepts in object oriented programming in action.
- Use an API to develop a game
- Write a game program that can be part of your computer science portfolio of work
- Have an experience in Event Driven Programming

Our first hurdle will be to get the greenfoot environment working on a computer that you can use. I have requested that it be installed on the classroom computers (I thought until this week that we'd be able to do it ourselves), but I'm not sure how long that will take.

I need to know if you are going to need an alternate computing environment for this project.

Please [attempt to download greenfoot](https://www.greenfoot.org/download) (<https://www.greenfoot.org/download>) and get it running. I've included a greenfoot starter project (Hedgehog.zip) that you can try to open up to see if it is working. In the Hedgehog directory, find the greenfoot.project file and double click to open up the greenfoot environment.

Let me know your status in this assignment.
